Step 1: Structure Chart

Step 2: Function Pseudocode

```
compute_offset(month, year)
   elapsed_days <- 0
   FOR current_year <- 1753 … year – 1
      IF is_leap_year(current_year)
         elapsed_days <- elapsed_days + 366
      ELSE
         elapsed_days <- elapsed_days + 365
   FOR current_month <- 1 … month - 1
      elapsed_days <- elapsed_days +
      number_days_in_month(current_month, year)
   position_shift <- elapsed_days MOD 7
   beginning_day <- 1 + position_shift
   return beginning_day MOD 7
```

Step 3: Function Flowchart

start
Prompt for year
is year an int?
no
yes
display error message 1
year > 1752
no
yes
display error message 2
return year
end
